Abstracts

Human keypoint recognition is a computer vision technology that understands human posture by detecting the precise positions of joints and key parts of the human body (such as the head, shoulders, elbows, wrists, hips, knees, and ankles). It typically takes images or videos as input and uses deep learning models to automatically output the coordinates of each keypoint, thereby supporting various applications such as posture analysis, action recognition, motion correction, and human-computer interaction. The human body keypoint recognition market is experiencing rapid expansion, driven primarily by the digital transformation of multiple industries. With increasing demands from fitness technology, smart security, interactive entertainment, short video content analysis, and industrial safety management, enterprises are placing greater emphasis on high-precision, low-latency posture recognition capabilities that can operate stably in complex environments. Simultaneously, the development of edge computing and lightweight models has moved keypoint recognition from the cloud to terminal devices, reducing costs and latency, alleviating data privacy concerns, and facilitating large-scale deployment. On the other hand, industry specialization and in-depth scenario development are becoming new competitive focuses. Simply providing keypoint coordinates is no longer sufficient to create a commercial barrier; "scenario models" with industry knowledge are more valuable, such as monitoring workstation movement standards in manufacturing, assessing movement quality in sports, and automating posture analysis in medical rehabilitation. As enterprises gradually realize the potential of posture data in optimizing processes, improving security, and creating personalized services, human body keypoint recognition is evolving from a basic visual capability into a crucial supporting technology for industry intelligence.

The global Human Key Point Recognition market size was estimated at USD 705.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

6.50% during the forecast period.
