Abstracts

A Human Occupied Vehicle (HOV) refers to a submersible or underwater craft specifically designed to transport one or more human occupants to deep-sea environments for scientific research, commercial exploration, maintenance, or tourism purposes. These vehicles are typically equipped with life support systems, pressure-resistant hulls, observation windows, manipulator arms, and advanced navigation and communication technologies to operate safely at extreme depths, ranging from a few hundred to several thousand meters below the ocean surface. HOVs are distinct from remotely operated vehicles (ROVs) and autonomous underwater vehicles (AUVs) due to the direct human presence onboard, which allows for real-time decision-making, complex sampling, and hands-on intervention in underwater operations. They are used across academia, government research institutions, offshore industries (such as oil and gas or submarine cable maintenance), and increasingly in the high-end tourism sector for deep-sea expeditions.

The global Human Occupied Vehicle market size was estimated at USD 120.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
