### Report Overview:

Human platelet lysate (HPL) is a non-animal derived cell culture growth supplement obtained from blood platelets after freezing and thawing. HPL contains abundant growth factors and cytokines necessary for cell growth and proliferation. Platelet lysate can be used as a source of growth factors to replace bovine serum in cell culture medium. Replacing bovine serum with HPL allows expansion and clinical grade production of functional mesenchymal stromal cells by removing the risk of xenogeneic immune reactions and transmission of bovine prion and viral pathogens.

The Global Human Platelet Lysate Market Size was estimated at USD 2577.16 million in 2023 and is projected to reach USD 2919.42 million by 2029, exhibiting a CAGR of 2.10% during the forecast period.
