Abstracts

Human pose estimation software is an intelligent analysis tool that uses computer vision and deep learning algorithms to automatically identify key points of the human body (such as shoulders, elbows, knees, and ankles) from images or videos and reconstruct the coordinates of the human skeleton. It can determine human movements, postures, and motion trajectories in real time or offline, providing data support for scenarios such as motion analysis, motion capture, fitness guidance, safety monitoring, AR/VR, and human-computer interaction, significantly improving the understanding and automated processing capabilities of human behavior. With advancements in deep learning models, lightweight networks, and edge computing capabilities, the accuracy and real-time performance of human pose estimation software have significantly improved, accelerating its adoption in applications such as sports training, smart security, smart retail, virtual try-on, and human-computer interaction. More and more industries are replacing traditional sensors with pose estimation to achieve wearable, low-cost motion recognition, driving continuous market expansion, particularly in the sports technology and visual AI industry chain, where it has become a significant growth driver. On the commercial front, pose estimation algorithm vendors are offering various models, including SaaS services, API calls, and SDK licensing, to meet the needs of enterprises for rapid integration. With the widespread adoption of cloud computing and edge devices, enterprises are increasingly favoring lightweight, cross-platform solutions that can be deployed in multiple scenarios. Simultaneously, international and domestic algorithm giants are launching open-source or semi-open-source models, intensifying industry competition and innovation. The future market will develop towards a platform-based approach encompassing "high precision + multi-person recognition + 3D rendering + real-time analysis," with companies possessing data advantages and industry solution capabilities becoming more competitive.

The global Human Pose Estimation Software market size was estimated at USD 705.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
