Report Overview

Human thrombin is a crucial serine protease involved in the blood coagulation cascade, playing a key role in converting fibrinogen into fibrin to form stable blood clots. It is widely used in surgical procedures, wound care, and hemostatic applications, particularly in trauma, cardiovascular, and orthopedic surgeries. The market for human thrombin is driven by the increasing prevalence of chronic diseases requiring surgical interventions, rising demand for advanced hemostatic agents, and the growing number of trauma cases worldwide. Additionally, innovations in recombinant thrombin and the expansion of biopharmaceutical manufacturing capabilities have further propelled market growth. However, regulatory challenges, high production costs, and the availability of alternative hemostatic agents, such as bovine or porcine thrombin, may restrain market expansion. Geographically, North America and Europe dominate due to well-established healthcare infrastructure and high adoption rates of advanced surgical products, while Asia-Pacific is expected to witness significant growth due to increasing healthcare investments and a rising geriatric population. Key players in the market focus on strategic collaborations, product advancements, and geographic expansions to strengthen their market presence.

The global Human Thrombin market size was estimated at USD 180.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
