Abstracts

Humanized antibodies mainly refer to antibodies re-expressed by gene cloning and DNA recombination technology of mouse monoclonal antibodies, most of the amino acid sequences of which are replaced by human sequences, and reducing the its heterogeneity is beneficial to the human body. The constant region part (ie, CH and CL regions) of humanized antibody are encoded by human antibody genes. Human antibodies can greatly reduce the immune side effects of heterologous antibodies on the human body. The humanized antibody market was witnessing steady growth, primarily due to the rising demand for targeted therapies in the treatment of cancer, autoimmune diseases, and other medical conditions. The market featured a mix of large pharmaceutical companies, biotechnology firms, and specialized antibody developers. Major players like Roche, Novartis, and Johnson & Johnson were actively involved in the development and commercialization of humanized antibodies.
