Abstracts

Humanoid Robot Speed ??Reducers are mechanical devices designed to reduce the speed and increase the torque of motors in humanoid robot joints. They allow precise, smooth, and controlled movement of the robot?s limbs and joints by matching the high-speed, low-torque output of electric motors to the slower, high-torque requirements of human-like motion. Humanoid robots are increasingly being deployed in service industries, such as healthcare, hospitality, and retail. In healthcare, robots assist in surgeries, rehabilitation, and patient care, while in hospitality and retail, robots perform tasks like customer service and product management. These robots need to interact in a human-like manner, requiring precise and reliable movement systems. Speed reducers enable the smooth, controlled motion of humanoid robots, ensuring they can perform tasks with high accuracy, making them integral to the development and functionality of service robots.
