Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Humanoid Robotic Cycloidal Reducer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Humanoid Robotic Cycloidal Reducers reached 142,800 units, with an average selling price of US\$1,267.61 per unit and a gross profit margin of approximately 29.2%, with a single production line capacity of 20,000 units. Cycloidal reducers are a new type of reducer that combines high precision and high load capacity. They are a type of RV reducer, applying the planetary transmission principle and employing a novel transmission device with cycloidal pin gear meshing. Cycloidal pinwheel reducers combine high precision (superior to planetary reducers) and high load capacity (superior to harmonic reducers), while also being small in size and light in weight (superior to RV reducers), exhibiting good transmission efficiency and transmission ratio, and relatively moderate cost. Optimization and upgrades in performance, structure, and materials based on cycloidal reducers are expected to gradually meet the needs of humanoid robots in various scenarios. In the industrialization wave of cycloidal reducers, companies with precision manufacturing capabilities and customer resources are seizing the initiative. The trend of vertical integration in the industrial chain is becoming increasingly apparent. Leading companies are extending from single reducer production to joint module integration, combining cycloidal reducers with torque motors, encoders, brakes, etc., to form integrated joints. Cycloidal pinwheel reducers combine high precision (superior to planetary reducers) and high load capacity (superior to harmonic reducers), while also being small in size and lightweight (superior to RV reducers). They offer good transmission efficiency and gear ratio, and their cost is relatively moderate. Optimization and upgrades to the performance, structure, and materials of cycloidal reducers are

expected to gradually meet the needs of humanoid robots in various scenarios. This is projected to create a humanoid robot market exceeding 14 billion yuan by 2030, propelling the entire industry into a critical stage of functional realization and commercialization.

The global Humanoid Robotic Cycloidal Reducer market size was estimated at USD 181.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 56.00% during the forecast period.
