Abstracts

Humic based biostimulants are a category of agricultural inputs derived from humic substances, primarily humic and fulvic acids, which are natural organic compounds formed through the decomposition of plant and animal matter over long periods. These products are applied to crops, soil, or growth media to enhance plant growth, nutrient uptake, stress tolerance, and overall crop productivity by improving soil structure, increasing microbial activity, and stimulating physiological processes in plants, rather than providing direct nutrition like fertilizers.

The global Humic Based Biostimulants market size was estimated at USD 460.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
