Abstracts

The Hunting Laser Rangefinder uses a laser beam aimed at the target to determine its distance. A laser is beamed to the target, like the pin, and reflects back to the rangefinder. The time in which it took the laser to reflect back to the device is used to calculate the distance. The growing demands of the defense sector, the modernization of warfare, and the development of laser-guided weapons have accelerated the adoption of laser rangefinders. The increasing application of laser range finders in sports activities and the use of laser range finders in autonomous vehicles are boosting the adoption of laser range finders across the globe.

The global Hunting Laser Rangefinders market size was estimated at USD 260.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
