## Abstracts

HVDC Voltage Source Converters (VSC) technology makes up for the natural defect of commutation failure in conventional DC transmission technology, which may cause power transmission interruption and thus system fluctuation. It has many advantages such as commutation without grid support, flexible power four-quadrant control, space saving without reactive compensation device, and low harmonic emission in multi-level topology. It has great application potential in the fields of large-scale renewable energy grid connection, offshore wind power grid connection, island power supply, urban power supply, asynchronous grid interconnection, long-distance power transmission, multi-terminal DC transmission network, etc. It is one of the key technologies for building a new power system with new energy as the main body.

The global HvdC Voltage Source Converters Vsc market size was estimated at USD 2483.54 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
