Abstracts

Hydrotreated Vegetable Oil (HVO) is a renewable fuel produced by hydrotreating vegetable oils or animal fats. It has a chemical structure similar to fossil diesel, allowing it to be used directly in existing diesel engines without modification. HVO burns cleaner, with extremely low sulfur content and significantly reduced carbon emissions compared to conventional diesel. Sustainable Aviation Fuel (SAF) is a type of low-carbon aviation fuel derived from renewable feedstocks such as waste oils, vegetable oils, syngas, or biomass. SAF helps to significantly reduce the aviation industry's carbon footprint and can be blended with conventional jet fuel without requiring changes to existing aircraft or fuel infrastructure. HVO and SAF play a crucial role in reducing carbon emissions, enhancing energy security, and promoting sustainable development.

The global HVO and SAF market size was estimated at USD 11510.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.50% during the forecast period.
