Report Overview:

Hyaluronic acid is a naturally occurring substance found in various tissues throughout the body, including the mouth. In terms of oral care, hyaluronic acid has been used topically to help moisturize and protect the soft tissues of the mouth.

Hyaluronic acid has several properties that make it an attractive ingredient in oral care products. For example, its high viscosity allows it to retain water within the tissues, helping them stay hydrated and preventing dryness or irritation. Additionally, hyaluronic acid acts as a cushioning agent, providing comfort and protection against damage caused by external factors like harsh foods or teeth grinding. Finally, it also plays a role in promoting healing and reducing inflammation in the mouth through its ability to stimulate collagen production and attract immune cells.
