### Report Overview:

A hybrid aircraft is a powered aircraft which has fixed wings. Hybrid aircrafts are particularly applicable for long endurance flights. Hybrid aircrafts with rotary wings are used for heavy lift applications. Hybrid aircrafts are primarily operated by electricity. However, during take-off or climb, these aircrafts require large amount of power and this extra power requirement can be supplemented by energy produced from turbine generators. The power produced from turbine generators does not create sound pollution and with the help of hybrid power, these aircrafts can use this excess power to recharge the onboard batteries.

The Global Hybrid Aircraft Market Size was estimated at USD 530.82 million in 2023 and is projected to reach USD 885.36 million by 2029, exhibiting a CAGR of 8.90% during the forecast period.
