Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hybrid eCall competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hybrid eCall is an advanced automotive emergency call system that intelligently switches between 4G/5G and traditional 2G/3G networks. In the event of an accident, the system automatically selects the best available network to initiate an emergency call and transmit critical vehicle data based on network coverage, ensuring uninterrupted emergency call service in a variety of network environments. The hybrid eCall (emergency call system) industry chain is well-defined, spanning from key components to final service implementation. Its upstream components primarily include core hardware, software, and communications support, while its downstream components involve service operations and final applications. In 2024, the global average price of a hybrid eCall system is expected to be US\$145 per unit, with annual sales of approximately 699,200 units, an average annual production capacity of 10,000 to 20,000 units per line, and an average industry profit margin of 30% to 45%.

The global Hybrid eCall market size was estimated at USD 101.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
