Abstracts

Hybrid Electric Trucks (HETs) refer to commercial vehicles that utilize a powertrain combining an internal combustion engine (typically diesel) with an electric propulsion system, enabling the vehicle to operate on either power source or both simultaneously. These trucks are designed to reduce fuel consumption and emissions compared to conventional diesel trucks by capturing and reusing energy through regenerative braking and leveraging electric power during low-speed or idle operations, making them particularly suitable for urban delivery, refuse collection, and other stop-and-go applications where frequent braking and acceleration occur. The hybrid system may be configured in parallel, series, or power-split arrangements, balancing the benefits of electric efficiency with the range and refueling convenience of traditional engines.

The global Hybrid Electric Truck (Het) market size was estimated at USD 28970.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 25.50% during the forecast period.
