Abstracts

Hybrid electric vehicles (HEVs) are automobiles that combine an internal combustion engine (usually gasoline-powered) with one or more electric motors and a battery pack, enabling them to operate using either power source or a blend of both; unlike plug-in hybrids or fully electric vehicles, HEVs cannot be charged from an external power source and instead rely on regenerative braking and the internal combustion engine to recharge their batteries, resulting in improved fuel efficiency and reduced emissions compared to conventional vehicles without requiring changes to refueling habits or infrastructure.

The global Hybrid Electric Vehicles market size was estimated at USD 720.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
