Abstracts

Hybrid electric water heaters, also known as heat pump water heaters, are energy-efficient appliances that combine conventional electric resistance heating with heat pump technology to transfer ambient heat from the surrounding air into the water, significantly reducing electricity consumption compared to traditional models. This dual-operation system allows the unit to switch to standard electric heating during periods of high hot water demand or in colder environments where heat pump efficiency declines. Designed primarily for residential and light commercial applications, these units are positioned as a sustainable alternative that lowers operating costs and carbon footprints, aligning with growing consumer and regulatory emphasis on energy conservation.

The global Hybrid Electric Water Heater market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
