## Abstracts

Hybrid engine vehicles, commonly referred to as HEVs, are automobiles that utilize a powertrain combining an internal combustion engine (typically gasoline-powered) with one or more electric motors and a battery pack, enabling the vehicle to operate on either power source alone or both simultaneously; this dual-system architecture allows for improved fuel efficiency and reduced emissions compared to conventional vehicles, particularly in stop-and-go traffic conditions where regenerative braking recaptures energy that would otherwise be lost.

The global Hybrid Engine Vehicles market size was estimated at USD 1025.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 13.20% during the forecast period.
