Abstracts

Hybrid imaging involves the fusion of two (or more) imaging techniques to form a new technique. By combining the innate advantages of the fused imaging technologies synergistically, a new and more powerful modality comes into being. Some of the hybrid imaging techniques includes Photon Emission Transmission (PET)/Computed Tomography (CT), ultrasound and Magnetic Resonance Imaging (MRI), ultrasound and CT, MRI and CT, and others. The hybrid imaging market has witnessed a growing adoption of PET/CT hybrid imaging technology, owing to its advantages such as early diagnosis, accurate disease staging, and effective response to the treatment of chronic conditions such as cancer. Additionally, PET/CT is the gold standard for oncology imaging and the manufacturers are further improving the technological capabilities of hybrid imaging systems. This will further improve the adoption rates worldwide. The restraining factors for the growth of hybrid imaging systems is site accreditation, dearth of skilled professionals, and high costs of imaging systems.

The global Hybrid Imaging market size was estimated at USD 5920.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Hybrid Imaging market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
