Abstracts

Hybrid mining dump trucks are heavy-duty vehicles designed for open-pit mining operations, combining a conventional internal combustion engine (typically diesel) with an electric drive system to improve fuel efficiency, reduce emissions, and enhance operational performance. These trucks capture and reuse energy generated during braking or downhill travel through regenerative braking systems, storing it in onboard batteries or capacitors to assist with propulsion, thereby decreasing fuel consumption and lowering greenhouse gas outputs compared to traditional dump trucks. They are engineered to handle extreme payloads and harsh terrains while offering mining companies a transitional solution toward fully electric or alternative fuel vehicles without compromising on power, durability, or hauling capacity.

The global Hybrid Mining Dump Truck market size was estimated at USD 1125.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
