Abstracts

A hybrid-powered uncrewed surface vessel is an autonomously navigating device that combines traditional power sources with new energy power sources, and has the ability to flexibly switch power modes according to different working conditions to adapt to complex and changeable operating environments. Its characteristic lies in having both the advantage of the stable and long - lasting output of traditional power to ensure long - duration operations and the environmentally friendly and energy-saving operation effect achieved by new energy power. Technically, it requires an advanced power management system to precisely regulate the output and coordination of different power sources, ensuring efficient energy utilization and stable operation of the device. With these functions and characteristics, the vessel can continuously and reliably complete preset tasks without real-time manual intervention.
