Report Overview

A hybrid is the product of a cross between two genetically distinct rice parents. When the right parents are selected, the hybrid will have both greater vigor and yield than either of the parents. Due to hybrid vigor, hybrid rice has 15-30% yield advantage over the conventional rice that farmers grow. Rice cultivation using hybrid rice seeds has been reported to produce higher economic returns when compared to the economic returns of conventional rice varieties. This is due to the significant yield the hybrid rice seeds over conventional rice seeds. Also, the milling yield of hybrid rice seeds was found to be the same, or in some cases better than the milling yield of conventional rice seeds. This advantage of cultivation with hybrid rice seeds is likely to encourage poor farmers to shift from conventional rice seeds to hybrid rice seeds.

The global Hybrid Rice Seeds market size was estimated at USD 2525.20 million in 2023 and is projected to reach USD 2224.27 million by 2032, exhibiting a CAGR of -0.01 during the forecast period.
