Report Overview

Hybridoma Development Service is a service provided by biotechnology companies or research organizations to generate hybridoma cell lines. Hybridoma cells are created by fusing myeloma cells (cancerous, immortalized B-cells) with normal B-cells that produce an antibody of interest. The resulting hybridoma cells have the ability to produce large quantities of a specific antibody with high affinity and specificity. The hybridoma development process involves several steps, including immunization of laboratory animals, cell fusion, selection of hybridomas, and screening of antibody production. Hybridoma cells can be used for various applications, including diagnostic tests, therapeutic treatments, and research purposes. The hybridoma development service provides a convenient and efficient way for researchers and companies to obtain custom-made monoclonal antibodies for their specific needs.
