Hydrated silica is also known as white carbon black, also known as light silica, the main component is silica, white amorphous powder (Figure 1), light and loose, soluble in caustic alkali and hydrofluoric acid, insoluble in water, solvents and acids (except hydrofluoric acid). High temperature resistance, non-combustible, odorless, odorless, with good electrical insulation. It does not decompose at high temperature, has high insulation, and has the characteristics of small particles, large specific surface area, and high structure. It is mainly used as an excellent light-colored reinforcing agent, lubricant and insulating material in the rubber industry. It can be prepared by reacting dilute sodium silicate solution with dilute hydrochloric acid. The global hydrated silicon dioxide market is primarily driven by the increasing demand from various industries such as food and beverages, pharmaceuticals, chemicals, electronics, and cosmetics. Here are some key factors that contribute to the market growth:

Desiccant and moisture-absorbing applications: Hydrated silicon dioxide, especially in the form of silica gel, is widely used as a desiccant to control and absorb moisture in various products and environments. Its effective moisture absorption capabilities make it valuable in industries such as packaging, electronics, and pharmaceuticals.

Catalyst support in chemical processes: Hydrated silicon dioxide finds applications as a support material for catalysts in chemical reactions. Its high surface area and stability make it suitable for enhancing reaction efficiency in industries like petrochemicals, pharmaceuticals, and refining.

Increasing use in chromatography: Hydrated silicon dioxide, particularly in the form of silica gel, is extensively used in chromatography techniques for separation and purification purposes. The continued development and advancements in analytical and pharmaceutical industries contribute to the demand for hydrated silicon dioxide in this application.

Growing demand in the food and beverages industry: Hydrated silicon dioxide is used as an anti-caking agent in food and beverages to prevent clumping and enhance flowability. It is also utilized as a carrier for flavors and other additives. As the

food and beverage industry continues to expand, the demand for hydrated silicon dioxide in this sector is expected to increase. Environmental and water treatment applications: Hydrated silicon dioxide has adsorption properties that make it useful in removing impurities and pollutants from water and air. As environmental concerns and regulations regarding water and air quality continue to grow, the demand for hydrated silicon dioxide for environmental applications is likely to rise.

The global Hydrated Silicon Dioxide market size was estimated at USD 3938.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
