Abstracts

The hydraulic climbing formwork system mainly consists of formwork, hydraulic system, climbing mechanism and control system. The formwork will be designed to the appropriate shape and size according to the project needs. The hydraulic system provides the power required for the formwork to climb. Through the precise operation of the control system, the climbing mechanism can smoothly lift the formwork to the specified position to complete the construction of one floor. As the number of floors increases, the formwork will climb layer by layer to adapt to the new construction height.

The global Hydraulic Automatic Climbing Formwork System market size was estimated at USD 899.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
