Abstracts

There are two main styles of disc brake: mechanical (or cable-activated), and hydraulic. Mechanical disc brakes use cables and are placed on traditional cantilevers and V-brakes. This makes installation and adjustment simpler. They are lighter than hydraulic brakes and are less complicated to maintain. Hydraulic disc brakes offer a closed system with hoses containing special hydraulic fluid. This is what operates the brakes. When the brake is pressed, a plunger pushes fluid through a hose, into a caliper that pushes the pads against the rotor to stop the bike. The good thing about this type of disc brake is that the brakes are covered and protected from debris and buildup. The braking with this brake is smooth and powerful. It also allows for near-to-none maintenance once it's properly installed.

The global Hydraulic Disc Brakes market size was estimated at USD 4719.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
