Abstracts

Hydraulic Dishing Press is a specialized piece of equipment used in metalworking processes, primarily for shaping and forming metal sheets into curved or dished shapes. It utilizes hydraulic force to apply pressure to the metal, forcing it into a mold or die to achieve the desired curvature. This machine is commonly used in the manufacturing of parts for industries such as automotive, aerospace, and pressure vessel production. The hydraulic system in the press enables precise control over the pressure and stroke length, allowing for the creation of complex shapes with high accuracy. The press typically consists of a hydraulic cylinder, die set, ram, and a sturdy frame to hold the components. The metal sheet is placed between the upper and lower dies, and the hydraulic force is applied to form the sheet into a concave or convex shape.

The global Hydraulic Dishing Press market size was estimated at USD 513.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
