Report Overview:

The fineblanking press is not a standard stamping press. Fineblanking presses are unique by providing three specific motions: a stinger motion, which brings the stinger plate up and holds the material in place during blanking; a blanking motion, which provides the blanking force to push the part into the die cavity; and a counter pressure motion, which holds the piece against the blank punch during blanking and ejects the piece part from the die cavity after blanking is complete.

There are two types of fineblanking presses: hydraulic and mechanical. Most fineblanking presses are hydraulic presses. Some smaller presses (up to 250 tons) are mechanical and all of the larger presses (over 250 tons) are hydraulic. The mechanical presses use a link system to generate the blanking pressure and hydraulics to create stinger pressure and counter pressure. The hydraulic presses use hydraulic pressure for all three motions.

In this report, we only focus on the hydraulic fineblanking presses.

The Global Hydraulic Fineblanking Presses Market Size was estimated at USD 3997.67 million in 2023 and is projected to reach USD 4718.09 million by 2029, exhibiting a CAGR of 2.80% during the forecast period.
