Report Overview

Hydraulic forging press is a kind of forging equipment that uses hydraulic pressure as the driving force to achieve the forging process. It is a kind of high-efficiency and energy-saving forging equipment. The main structure of the hydraulic forging press includes the frame, cylinder, die, forming tool, oil pump, etc. The cylinder is filled with oil under high pressure, and then the oil pressure is transmitted to the cylinder through the oil pump. The cylinder drives the forming tool to move forward to complete the forging process. The frame is used to support the cylinder and die, and ensure the stability and accuracy of the forging process. The die and forming tool are used to shape and form the blank. The oil pump is used to generate high-pressure oil to drive the cylinder. The hydraulic forging press has the characteristics of high efficiency, low power consumption, good quality and low noise. It is widely used in automobile, motorcycle, agricultural machinery, aviation, shipbuilding and other industries.
