Report Overview

Grippers are devices that allow robots to lift and move objects. They include magnetic grippers, vacuum grippers and so on. When combined with a robot arm, grippers enable manufacturers to automate critical processes, such as assembly, pick and place. Hydraulic grippers are designed for a hydraulic system. Hydraulic grippers are powered by hydraulic fluids, offer more gripping power than pneumatic grippers and make themselves ideal for heavy-duty applications. On the one hand, Hydraulic grippers are used when there is a need for extra gripping force. On the other hand, Hydraulic grippers are more costly, and they are generally less accurate than pneumatic or electric. They tend to be higher maintenance than other grippers.

The global Hydraulic Grippers market size was estimated at USD 756 million in 2023 and is projected to reach USD 927.69 million by 2032, exhibiting a CAGR of 2.30% during the forecast period.
