Report Overview

Because the hydraulic pendulum shearing machine moves in a circular arc, and the production of circular arc blades is quite difficult, generally the blade is used as a shim to make up, so the gap obtained is not accurate, and the cut sheet is not very ideal. Because it is an arc motion, the blade cannot be made into a rectangle, but should be made into an acute angle, so the stress on the blade is not ideal, and the damage to the blade is also relatively severe.
