Abstracts

Hydraulic Ram BOP is a key well control equipment. It drives the ram through the hydraulic system to control the flow of high-pressure fluid or gas at the wellhead. It is mainly composed of a housing, a side door, a cylinder, a cylinder head, a piston, a piston rod, a locking shaft, a seal, a ram, etc. During the oil drilling process, it can quickly close the wellhead when encountering high-pressure oil and gas to prevent oil and gas from spraying out and ensure the safety of drilling operations. Hydraulic Ram BOP uses the hydraulic system to push the piston to drive the ram to close or open the wellhead. It has the characteristics of withstanding high pressure, good reliability, and rapid response. It is not only suitable for the field of oil drilling, but also widely used in chemical, natural gas transportation, water treatment and other industrial fields that need to control high-pressure fluids.

The global Hydraulic Ram BOP market size was estimated at USD 1544.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
