Report Overview:

Water hammers, also known as hydraulic shocks, are surges of pressure that occur when water in a pipeline system suddenly changes direction. When these occur in your home plumbing system, they usually make loud, annoying bangs. Aside from the noise, they can cause your pipes to vibrate violently and even damage them to the point of causing perforations or bursts at pipe seams, causing water damage and possible flooding in bathrooms, laundry rooms, and basements. Thankfully, water hammer arrestors can be purchased and installed on your existing plumbing system to combat this problem.
