Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydraulic Steering System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hydraulic steering system is a kind of hydraulic power assisted steering device, which converts the mechanical energy of engine into hydraulic energy through hydraulic pump to drive steering mechanism to realize easy control. Market Concentration and Key Players: Internationally, the hydraulic steering system market concentration is relatively high, mainly concentrated in Europe, America and Japan and other developed countries. For example, Bosch and ZF and other large manufacturers; from the domestic point of view, hydraulic steering system still has a lot of room for development. Manufacturing Processes and Market Trends: The core of hydraulic steering system manufacturing process lies in precision casting, machining and system integration, involving aluminum alloy/cast iron pump body, control valve, hydraulic cylinder and other key parts of high-precision manufacturing, in which the valve core and valve sleeve fit clearance needs to be controlled in microns to ensure tightness, and through strict pressure testing and durability verification. Market trends are differentiated: in the passenger car field, traditional hydraulic power steering is being replaced by electric power steering due to high energy consumption, and EPS penetration rate in passenger cars exceeds 70% in 2025; in the commercial vehicle field, HPS is still the mainstream due to heavy load demand, especially in heavy truck models. At the same time, electro-hydraulic power steering as a transition technology, through the motor-driven hydraulic pump to solve the pain point of new energy vehicles without engine drive, in hybrid and electric commercial vehicles application growth. In the long run, steer-by-wire has become the direction due to the elimination of mechanical connections and support for high-level automatic driving, but it is difficult to

replace hydraulic systems in the commercial vehicle market in the short term due to high cost and safety redundancy requirements.

The global Hydraulic Steering System market size was estimated at USD 3560.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
