Abstracts

A hydraulic test bench (HTB) is a specialized industrial apparatus designed to verify and validate the performance, safety, and reliability of hydraulic components?such as pumps, motors, valves, cylinders, and actuators?by subjecting them to controlled, simulated operating conditions. It typically consists of a power unit, pressure and flow control systems, instrumentation for data acquisition (e.g., pressure transducers, flow meters, temperature sensors), and a structural frame to mount test specimens. HTBs enable precise measurement of parameters like pressure, flow rate, temperature, and efficiency under varying loads, facilitating quality assurance, troubleshooting, research and development, and certification compliance in industries ranging from manufacturing and aerospace to construction and heavy machinery.
