Abstracts

The hydraulically driven diaphragm compressor is a positive displacement compressor that uses a hydraulic system to drive the diaphragm to reciprocate to achieve gas compression. Its working principle is to push the diaphragm through the hydraulic pressure to complete the process of gas suction, compression and discharge in a closed cavity. Since the gas is completely isolated from the hydraulic system, the compressor has the characteristics of oil-free lubrication, no leakage, high air tightness and corrosion resistance, and is widely used in the compression and transportation of high-purity gas, corrosive gas and flammable and explosive gas.

The global Hydraulically Driven Diaphragm Compressor market size was estimated at USD 583.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
