Report Overview

Hydrazine anhydrous is a highly reactive, colorless, and flammable inorganic compound with the chemical formula N_2H_4 , primarily used as a rocket propellant, reducing agent, and precursor in the production of pharmaceuticals, agrochemicals, and blowing agents. Its key applications include fuel for spacecraft and satellites due to its ability to decompose exothermically, generating thrust, as well as its role in water treatment for oxygen scavenging to prevent corrosion in boilers. The market is driven by demand from the aerospace and defense sectors, particularly in emerging economies investing in space exploration, alongside industrial applications in polymer manufacturing and pharmaceuticals. However, stringent environmental regulations due to its toxicity and carcinogenic properties pose challenges, leading to increased R&D for safer alternatives. The Asia-Pacific region dominates consumption, with China and India being major growth hubs, while North America and Europe focus on sustainable substitutes and niche industrial uses.

The global Hydrazine Anhydrous market size was estimated at USD 300.33 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
