Report Overview

Hydro Excavators are heavy Construction Machinery consisting of a boom, dipper (or stick), bucket and cab on a rotating platform known as the 'house'. The house sits atop an undercarriage with tracks or wheels. They are a natural progression from the steam shovels and often mistakenly called power shovels. All movement and functions of a Hydro excavator are accomplished through the use of hydraulic fluid, with hydraulic cylinders and hydraulic motors. Due to the linear actuation of hydraulic cylinders, their mode of operation is fundamentally different from cable-operated excavators which use winches and steel ropes to accomplish the movements.

The global Hydro Excavators market size was estimated at USD 60740 million in 2023 and is projected to reach USD 84967.13 million by 2032, exhibiting a CAGR of 3.80% during the forecast period.

North America Hydro Excavators market size was estimated at USD 16874.92 million in 2023, at a CAGR of 3.26% during the forecast period of 2024 through 2032.
