Abstracts

A hydroacoustic detector is a sensor based on acoustic principles, which is mainly used to detect the distance, depth and frequency of underwater objects, so as to accurately locate underwater targets. The hydroacoustic detector works by using the propagation characteristics of sound waves in water. When sound waves propagate in water, they will produce reflections, scattering and other phenomena when encountering different media or objects. By receiving and processing these sound wave signals, relevant information about underwater objects can be obtained.

The global Hydroacoustic Detector market size was estimated at USD 313.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
