## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrocarbon and Silicone Coolant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hydrocarbon and silicone coolant is a type of liquid medium primarily composed of hydrocarbon compounds and silicone polymers. Hydrocarbons, with their diverse molecular structures, offer good thermal conductivity and chemical stability, while silicone polymers impart excellent high-temperature resistance, oxidation resistance, and low surface tension. This coolant circulates through heat exchange systems, efficiently absorbing and transferring heat to maintain equipment within an optimal temperature range. It is suitable for cooling applications requiring high thermal stability and chemical compatibility, such as electronic device heat dissipation and industrial machinery cooling, reducing the risk of performance degradation and equipment failure caused by high temperatures.

The global Hydrocarbon and Silicone Coolant market size was estimated at USD 630.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
