Abstracts

Hydrocarbon refrigerants are natural refrigerants derived from hydrocarbon compounds, primarily propane (R-290), isobutane (R-600a), and propylene (R-1270), which serve as environmentally friendly alternatives to synthetic refrigerants like hydrofluorocarbons (HFCs) and hydrochlorofluorocarbons (HCFCs) due to their negligible ozone depletion potential (ODP) and very low global warming potential (GWP). These substances function efficiently in vapor-compression refrigeration cycles across applications such as domestic refrigerators, commercial cooling systems, and air conditioning units, offering advantages like high energy efficiency, compatibility with mineral oils, and reduced environmental impact, though their high flammability necessitates strict safety protocols during handling, installation, and maintenance.

The global Hydrocarbon Refrigerant market size was estimated at USD 345.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
