Abstracts

Hydrocolloid wound dressings are advanced medical devices composed of a flexible, absorbent matrix typically made from gel-forming agents like carboxymethylcellulose, pectin, and gelatin, laminated onto a waterproof polyurethane or polymer film backing; these specialized dressings create a moist healing environment by interacting with wound exudate to form a soft, protective gel that promotes autolytic debridement, manages moderate exudate, provides a barrier against external contaminants, and adheres securely to intact skin while remaining easy to remove without trauma to fragile periwound tissue or newly formed epithelium.

The global Hydrocolloid Wound Dressing market size was estimated at USD 1119.7 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
