Abstracts

Hydrodenitrogenation Catalyst (HDN) is a type of catalyst that is commonly used in the refining of petroleum and other hydrocarbon-based products. HDN catalysts are specifically designed to remove nitrogen-containing compounds from crude oil and other hydrocarbons, as these compounds can have negative impacts on the performance and quality of the end products. Nitrogen-containing compounds, such as pyridine and quinoline, are found in crude oil and other hydrocarbons as impurities. These compounds can have negative effects on the performance of fuels and other products, such as reducing the octane number of gasoline and increasing the amount of particulate matter in diesel exhaust. HDN catalysts work by promoting the reaction between hydrogen and nitrogen-containing compounds, which results in the removal of the nitrogen atoms from the molecule. The reaction is typically carried out under high pressure and high temperature conditions, and is catalyzed by a variety of metal-based catalysts, such as molybdenum, cobalt, and nickel. The effectiveness of HDN catalysts is typically measured by the degree of nitrogen removal achieved, as well as the selectivity of the reaction. Selectivity refers to the ability of the catalyst to selectively remove nitrogen-containing compounds, while minimizing the removal of other important components, such as sulfur-containing compounds. HDN catalysts are an important component of the petroleum refining process, as they play a key role in the production of high-quality fuels and other hydrocarbon-based products. In addition to their use in the refining of crude oil, HDN catalysts are also used in the upgrading of biofuels, such as biodiesel, to remove nitrogen-containing impurities and improve their performance. Overall, Hydrodenitrogenation Catalysts (HDN) are a vital component of the petroleum refining process, as they help to improve the performance and quality of hydrocarbon-based products by removing nitrogen-containing impurities.

The global Hydrodenitrogenation Catalyst (HDN) market size was estimated at USD

170.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
