## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrogel Fever Cooling Patch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hydrogel Fever Cooling Patch is a hydrogel patch providing targeted cooling relief from fever, headache, sunburn, and muscle pain. The patch contains a soft, gentle and skin-friendly material that sticks to the forehead without leaving any residue and pulling hair. It is ready to use and safe to use with medication also gives an 8 hours of cooling effect. The global shipment of hydrogel fever cooling patches in 2024 exceeded 1.18 billion Pcs, with an average factory price of approximately \$0.22 per piece. The North American fever cooling patch market is relatively mature, with demand driven by over-the-counter (OTC) healthcare products and consumer preference for non-medicated fever relief, especially for children. The United States and Canada see stable consumption through pharmacies, supermarkets, and online platforms. Product innovation, such as longer cooling duration and skin-friendly hydrogel materials, helps maintain competitiveness. The market also benefits from heightened awareness of home healthcare and self-medication trends. In Europe, demand for fever cooling patches is supported by a strong OTC healthcare culture and strict product quality standards. Countries like Germany, France, and the UK show steady sales, with higher penetration among parents seeking gentle fever management for children. However, regulatory requirements on medical device labeling and product safety create higher entry barriers for new brands. Growth opportunities exist in expanding online sales and targeting adult wellness segments. The Asia-Pacific region is the largest and fastest-growing market for fever cooling patches, driven by high population density, strong consumer acceptance, and widespread use in both children and adults. China leads in both production and consumption, supported by large-scale domestic manufacturers

and extensive retail distribution. Japan and South Korea have strong brand presence with advanced hydrogel technologies, while Southeast Asian countries show rapid uptake through pharmacies and convenience stores. Increasing e-commerce penetration further fuels growth. In other regions, such as Latin America, the Middle East, and Africa, the fever cooling patch market remains in an early development stage. Growth is supported by increasing healthcare awareness, expanding retail networks, and gradual adoption of non-medicated fever relief methods. However, lower consumer purchasing power and limited brand availability constrain rapid expansion.

The global Hydrogel Fever Cooling Patch market size was estimated at USD 263.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
