Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrogen Disulfide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Hydrogen disulfide reached approximately 340 tons, with an average global market price of around USD 2,170 per kilogram. Hydrogen disulfide (H_2S_2) is a colorless, unstable, and highly reactive chemical compound consisting of two hydrogen atoms bonded to a disulfide group ($-S-S-$). It is the simplest member of the disulfide family and is structurally analogous to hydrogen peroxide (H_2O_2), with sulfur atoms replacing oxygen. The compound is extremely unstable at room temperature, prone to decomposition into hydrogen sulfide (H_2S) and elemental sulfur, and has limited practical applications due to its instability and toxicity. It can be generated under controlled laboratory conditions, often in the study of sulfur chemistry, but is not typically encountered in nature or in industrial processes. The market drivers for hydrogen disulfide (H_2S_2) are primarily linked to its role as a niche intermediate in sulfur chemistry research, specialty synthesis, and materials science applications. Demand is supported by academic and industrial R&D focused on sulfur-containing compounds, particularly in the development of organosulfur materials, catalysts, and potential high-energy-density materials. Its structural similarity to hydrogen peroxide also makes it valuable in fundamental studies of chalcogenide bonding and reactivity. However, its extreme instability and toxicity limit large-scale commercial use, so market growth is mostly driven by specialized laboratory demand, custom chemical synthesis firms, and its relevance in advancing theoretical and applied sulfur-based chemistry.

The global Hydrogen Disulfide market size was estimated at USD 738.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the

forecast period.
