## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrogen Odorants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Hydrogen odorants production reached approximately 20 kilotons with an average global market price of around US\$ 9400 per ton. Hydrogen odorants are chemical compounds added to otherwise odorless hydrogen gas to give it a distinct smell, typically sulfur-based, so that leaks can be quickly and reliably detected for safety purposes. Because hydrogen is colorless, tasteless, and highly flammable, odorants such as thiols (mercaptans) or sulfides are introduced in very small concentrations to ensure human noses can sense even minor leaks before they reach dangerous levels. This practice parallels the odorization of natural gas, serving as a critical safety measure in hydrogen production, storage, transportation, and use in energy systems.

The global Hydrogen Odorants market size was estimated at USD 188.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Hydrogen Odorants market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
