Report Overview

The cutting principle of Hydrogen Plasma Cutter is similar to that of other plasma cutters. They all spray high-temperature plasma onto the surface of metal materials to make them heated, melted and oxidized to decompose, so as to achieve the purpose of cutting metal materials. However, because the chemical properties of hydrogen are different from oxygen and nitrogen, the cutting effect and thermal effect produced by hydrogen plasma cutting machines are also different, so it is suitable for different cutting scenarios and metal materials.
