## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrogen Storage Bottle Mouth Valve competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of hydrogen storage bottle mouth valves will reach 771,500 units, with an average selling price of US\$226.335 per unit, a gross profit margin of approximately 23.08%-42.5%, and a single-line production capacity of 5,000 units. Downstream hydrogen storage companies include Sinoma Technology, Tianhai Industry, CIMC Enric, Toyota, Faurecia, Plastic Omnium, and Hexagon. The annual production capacity of Type IV bottles varies depending on the company, ranging from 40,000 to 5,000 units, 10,000 units, 30,000 units, 60,000 units, and 100,000 units. Currently, the main hydrogen storage methods are high-pressure hydrogen cylinders and high-pressure vessels. High-pressure gaseous hydrogen storage cylinders are divided into four generations: pure steel metal cylinders (Type I), steel-lined fiber-wound cylinders (Type II), aluminum-lined fiber-wound cylinders (Type III), and plastic-lined fiber-wound cylinders (Type IV). Their primary application scenarios are on-board (for vehicle use and transportation) and stationary (for hydrogen production plants, refueling stations, etc.). High-pressure gas hydrogen storage and transportation is currently the most closely integrated method of storage and transportation with hydrogen supply. The bottle-mouth valve for hydrogen storage bottles is a core valve product. As a crucial component of hydrogen storage bottles, the bottle-mouth valve integrates functional components such as the TPRD, solenoid valve, pressure sensor, and temperature sensor, providing sealing, pressure reduction and stabilization, and real-time temperature and pressure monitoring.

The global Hydrogen Storage Bottle Mouth Valve market size was estimated at USD

175.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.70% during the forecast period.
