## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrogen Sulfide Removal System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Hydrogen Sulfide Removal System production reached approximately 1,739 sets with an average global market price of around k US\$230 per set. Single-line annual production capacity averages 450 sets, with a gross margin of approximately 32%. The upstream sector focuses on the production of chemical raw materials and specialized equipment. Midstream products, such as H<sub>2</sub>S absorption towers and catalysts, have an installation rate of up to 80% in industrial exhaust gas treatment facilities. Downstream consumption is closely tied to industrial emission standards and environmental regulations, with annual consumption increasing at a rate of 8% as environmental requirements become more stringent. Hydrogen Sulfide Removal System is an engineered assembly that systematically extracts and converts hydrogen sulfide from fluid or gaseous streams via chemical, physical, or biological mechanisms, incorporating absorption towers with regenerable solvents like amines or iron chelates to form stable compounds that are later decomposed to recover the agent and produce elemental sulfur or sulfates; adsorption beds using activated carbon or zeolites to physically trap H<sub>2</sub>S molecules, regenerated through thermal or pressure swing methods for sustained over 99% removal efficiency; and bioreactors harboring sulfur-oxidizing bacteria to metabolize H<sub>2</sub>S into sulfate ions under controlled conditions, ideal for lower concentrations with minimal chemical input; the system integrates real-time sensors, automated valves, and waste management units to dynamically handle varying loads, reducing H<sub>2</sub>S levels from thousands of ppm to below 1 ppm, thereby averting acidification, corrosion, and toxicity while enabling byproduct recovery like sulfur production for enhanced resource optimization and minimal downtime.

The global Hydrogen Sulfide Removal System market size was estimated at USD 400.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
